

# CHILDES-CCPCL Benchmark Report

**Date:** 2026-04-28

## 0. Gold RTTM

- **File:** `ccpcl_gold_standard_trimmed.rttm`
- **Path (resolved):** `/g/gold_dir/ccpcl_gold_standard_trimmed.rttm`

The benchmark gold reference is the RTTM above. When generated in this repository, the first header line is produced by `gold_rttm_from_annotations.format_gold_rttm_header` (fields such as `pipeline`, `source`, `merge_threshold`, `min_duration`, `output`, and annotation/audio directories). If silence **edge** trimming was applied when building the file, a second line records trim parameters via `format_trim_provenance_line` (`; trim_params ...`).

### Embedded header lines (verbatim from the gold RTTM):

1. Gold generation provenance (`format_gold_rttm_header`)

```
; gold_rttm pipeline=CHILDES-CCPCL source=cha merge_threshold=1.0s min_duration=0.1s prioritize_pog=N/A
output=ccpcl_gold_standard_trimmed.rttm cha_dir=data/raw/CCPCL/CCPCL audio_dir=data/CHILDES-CCPCL/audio
```

2. Silence-edge trim parameters (`format_trim_provenance_line`)

```
; trim_params pitch_floor=75.0 pitch_ceiling=500.0 intensity_drop_db=15.0 guard_ms=30.0 max_trim_s=1.5
min_duration=0.1 pad_s=0.5 time_step=0.01 method=pitch_or_intensity trim_silence_within=True
min_silence_dur=0.5 verbose=True
```

## Errata and evaluation window (UEM)

Metrics and timelines use a single evaluation interval per file: `[trim_start, trim_end]` when set (seconds), intersected with audio duration from run metadata. Auto errata is written beside trimmed gold as `AUTO_DATASET_ERRATA.json` and merged with manual errata by default.

- **Manual errata path:** `/g/errata.json`
- **Auto errata path:** `/g/gold_dir/AUTO_DATASET_ERRATA.json`

No manual errata file entries.

## Auto-generated errata (silence trim caps)

| File ID | trim_start (s)     | trim_end (s) | source | reason (trunc.)                                                                                                                                                                                              |

## Merged effective UEM (used for scoring)

**Note on aggregation:** Headline DER/JER/Boundary/Purity/Coverage are pooled only over recordings with per-file **Status == OK** (the numerator in the **Completed** column). Miss/FA/Conf are also averaged over the same completed recordings. Recordings with missing/failed outputs are shown in the deep dive tables but are not included in these headline aggregates.

Terminology & Methodology

- **DER (Diarization Error Rate):** Primary metric. Lower is better. Sum of Missed, False Alarm, and Confusion rates.
- **JER (Jaccard Error Rate):** Speaker-balanced diarization error. Lower is better.
- **Miss (%):** Speech present in Gold Standard but missed by the model.
- **FA (False Alarm %):** Model predicted speech where Gold Standard is silent.
- **Conf (Confusion %):** Speech correctly detected but assigned to the wrong speaker.
- **Boundary P/R/F1 (%):** Segmentation boundary precision/recall/F1 using tolerance 0.250s.
- **Purity (%):** Evaluates cluster purity. High purity = when a model identifies a speaker, it is consistently the same person.
- **Cover (Coverage %):** Evaluates how much of the original speaker's speech was captured under a single hypothesis cluster.
- **RTF (Real Time Factor):** Processing time divided by audio length. e.g., **< 0.01** means exceptionally fast processing.
- **VRAM (GB):** Peak GPU memory utilized. **0.0 GB** indicates an API/Cloud-based model.

3. Dataset Errata (Corrections Applied)

Corrections applied via Universal Evaluation Maps (UEM). See **S0** for full manual vs auto errata tables and merged bounds.

- **3-0114:** from **1.5416185567010308s**. *auto: auto: VAD-informed speech boundary exceeds what max\_trim\_s can move on the gold RTTM edge; residual margin still contains misleading speech labels. UEM excludes these edges during evaluation.*

4. Visual & Category Analysis

Bar charts compare models across **all** configured collars; boxplots and comparison tables use one evaluation collar and group files by **Primary category** (from recording metadata).
