Date: 2026-04-28

0. Gold RTTM

- **File:** default_gold_standard_trimmed.rttm
- **Path (resolved):** /g/gold_dir/default_gold_standard_trimmed.rttm

The benchmark gold reference is the RTTM above. When generated in this repository, the first header line is produced by `gold_rttm_from_annotations.format_gold_rttm_header` (fields such as `pipeline`, `source`, `merge_threshold`, `min_duration`, `output`, and annotation/audio directories). If silence **edge** trimming was applied when building the file, a second line records trim parameters via `format_trim_provenance_line` (`; trim_params ...`).

Embedded header lines (verbatim from the gold RTTM):

1. Gold generation provenance (`format_gold_rttm_header`)

```
; gold_rttm pipeline=ROG-Dialog source=trs merge_threshold=1.0s min_duration=0.1s prioritize_pog=false
output=default_gold_standard_trimmed.rttm trs_dir=data/ROG-Dialog/annotations/trs audio_dir=data/ROG-
Dialog/audio
```

2. Silence-edge trim parameters (`format_trim_provenance_line`)

```
; trim_params pitch_floor=75.0 pitch_ceiling=500.0 intensity_drop_db=15.0 guard_ms=30.0 max_trim_s=1.5
min_duration=0.1 pad_s=0.5 time_step=0.01 method=pitch_or_intensity trim_silence_within=True
min_silence_dur=0.5 verbose=True
```

Decoded gold generation metadata (from first header line):

Key	Value	Description
pipeline	ROG-Dialog	Benchmark pipeline / dataset name
source	trs	Annotation source (e.g. trs, cha)
merge_threshold	1.0s	Adjacent same-speaker merge threshold (s)
min_duration	0.1s	Minimum kept segment duration (s)
prioritize_pog	false	ROG TRS variant preference (pog/std)
output	default_gold_standard_trimmed.rttm	Gold RTTM filename written
trs_dir	data/ROG-Dialog/annotations/trs	TRS directory used
audio_dir	data/ROG-Dialog/audio	Audio directory used for trimming / filtering

Decoded trim parameters (from second header line):

Key	Value	Description
pitch_floor	75.0	Lower bound (Hz) for Praat pitch tracking when locating voiced speech at segment edges
pitch_ceiling	500.0	Upper bound (Hz) for Praat pitch tracking
intensity_drop_db	15.0	dB below local max intensity treated as non-speech for edge refinement
guard_ms	30.0	Minimum margin (ms) kept at trimmed boundaries after VAD
max_trim_s	1.5	Maximum seconds an edge may move inward (caps aggressive trims)
min_duration	0.1	Segments shorter than this (s) after trimming are dropped

Key	Value	Description
pad_s	0.5	Padding (s) added back after trimming to avoid cutting into speech
time_step	0.01	Analysis frame step (s) for pitch/intensity sampling
method	pitch_or_intensity	VAD mode: pitch_or_intensity
trim_silence_within	True	If true, split segments at internal silences (not only edge trim)
min_silence_dur	0.5	Minimum internal silence duration (s) required to split a segment
verbose	True	If true, trimmer emits detailed per-file diagnostics to the console

Errata and evaluation window (UEM)

Metrics and timelines use a single evaluation interval per file: [trim_start, trim_end] when set (seconds), intersected with audio duration from run metadata. Auto errata is written beside trimmed gold as AUTO_DATASET_ERRATA.json and merged with manual errata by default.

- **Manual errata path:** /g/errata.json
- **Auto errata path:** /g/gold_dir/AUTO_DATASET_ERRATA.json

Manual / gold errata

File ID	trim_start (s)	trim_end (s)	source	reason (trunc.)

Note on aggregation: Headline DER/JER/Boundary/Purity/Coverage are pooled only over recordings with per-file **Status == OK** (the numerator in the **Completed** column). Miss/FA/Conf are also averaged over the same completed recordings. Recordings with missing/failed outputs are shown in the deep dive tables but are not included in these headline aggregates.

Terminology & Methodology

- **DER (Diarization Error Rate):** Primary metric. Lower is better. Sum of Missed, False Alarm, and Confusion rates.
- **JER (Jaccard Error Rate):** Speaker-balanced diarization error. Lower is better.
- **Miss (%):** Speech present in Gold Standard but missed by the model.
- **FA (False Alarm %):** Model predicted speech where Gold Standard is silent.
- **Conf (Confusion %):** Speech correctly detected but assigned to the wrong speaker.
- **Boundary P/R/F1 (%):** Segmentation boundary precision/recall/F1 using tolerance 0.250s.
- **Purity (%):** Evaluates cluster purity. High purity = when a model identifies a speaker, it is consistently the same person.
- **Cover (Coverage %):** Evaluates how much of the original speaker's speech was captured under a single hypothesis cluster.
- **RTF (Real Time Factor):** Processing time divided by audio length. e.g., **< 0.01** means exceptionally fast processing.
- **VRAM (GB):** Peak GPU memory utilized. **0.0 GB** indicates an API/Cloud-based model.

3. Dataset Errata (Corrections Applied)

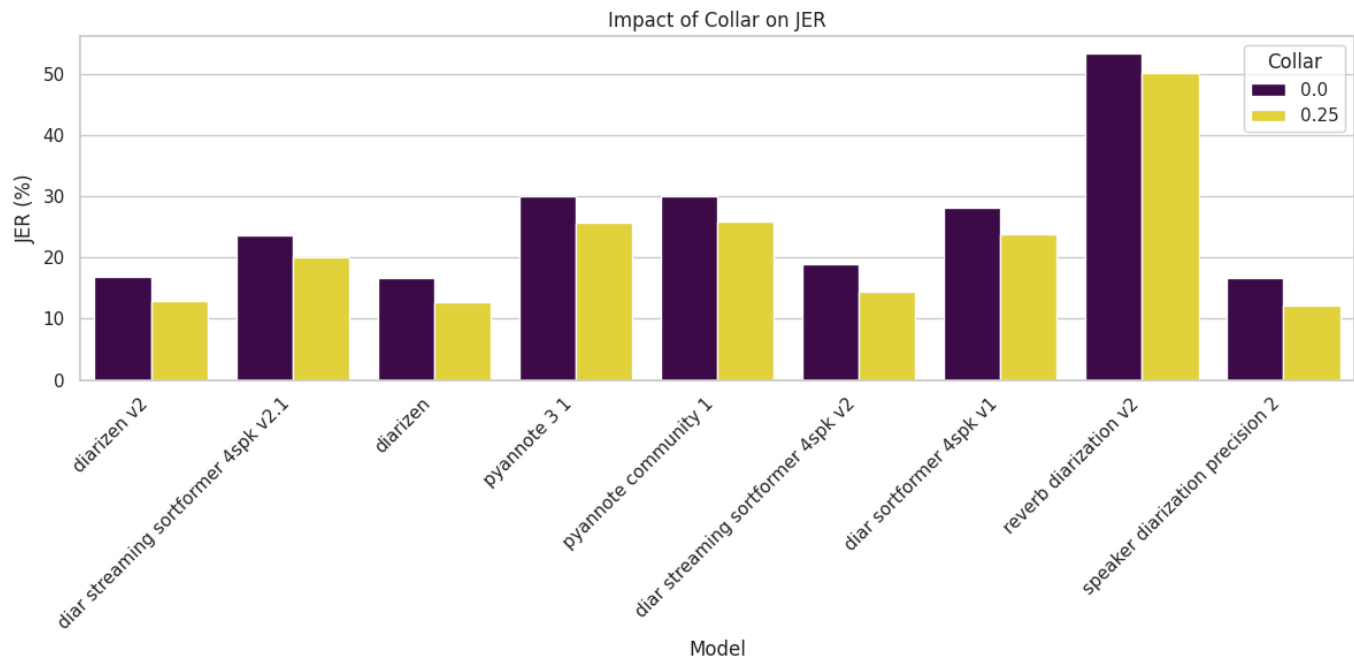

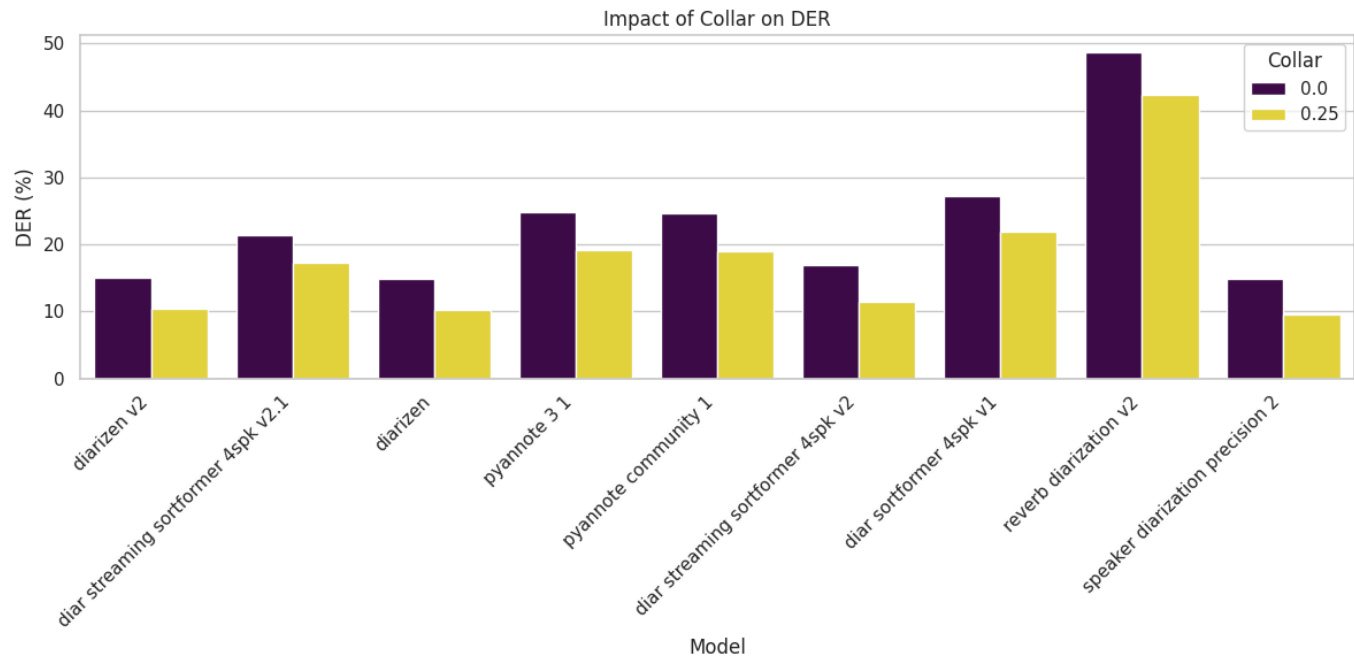

Corrections applied via Universal Evaluation Maps (UEM). See **§0** for full manual vs auto errata tables and merged bounds.
