Terminology & Methodology

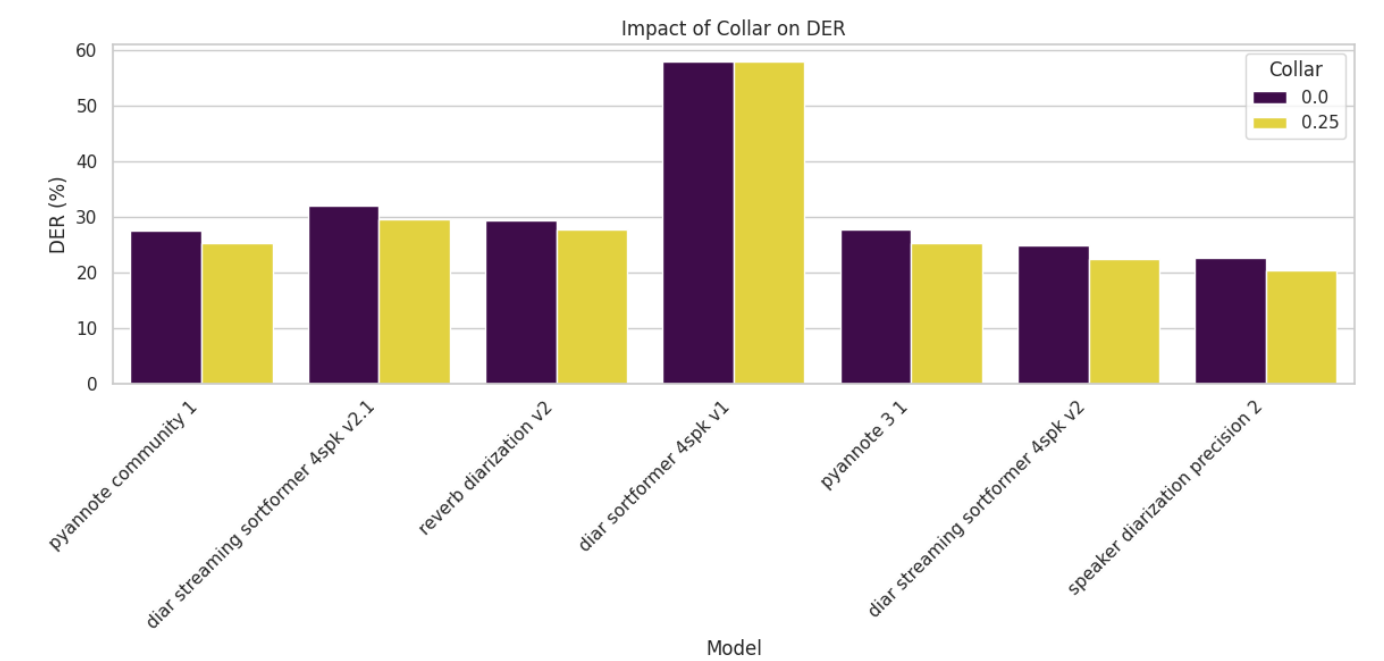

- **DER (Diarization Error Rate):** Primary metric. Lower is better. Sum of Missed, False Alarm, and Confusion rates.
- **Miss (%):** Speech present in Gold Standard but missed by the model.
- **FA (False Alarm %):** Model predicted speech where Gold Standard is silent.
- **Conf (Confusion %):** Speech correctly detected but assigned to the wrong speaker.
- **Purity (%):** Evaluates cluster purity. High purity = when a model identifies a speaker, it is consistently the same person.
- **Cover (Coverage %):** Evaluates how much of the original speaker's speech was captured under a single hypothesis cluster.
- **RTF (Real Time Factor):** Processing time divided by audio length. e.g., < 0.01 means exceptionally fast processing.
- **VRAM (GB):** Peak GPU memory utilized. 0.0 GB indicates an API/Cloud-based model.

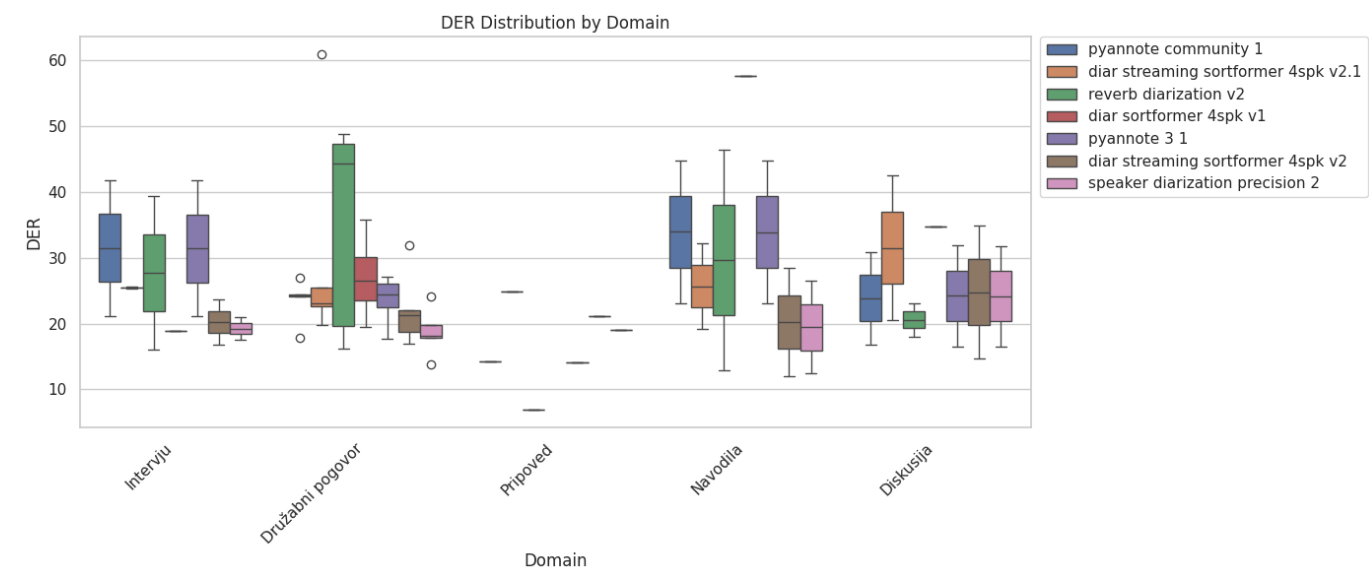

3. Dataset Errata (Corrections Applied)

Corrections automatically applied via Universal Evaluation Maps (UEM) to account for transcription errors. Models are not penalized for predictions outside these boundaries.

- **ROG-Dia-GS0-P0016:** Evaluated only up to 1172.092s. Reason: Zlati standard se zaključi predčasno pri 19:32 (potrdila avtorica). Preostanek posnetka se ignorira pri izračunu metrik.
